

Optimize Conveyor Operations

Keep your product moving, eliminate bottlenecks and add efficiencies with an integrated [conveyor control system](#) from Nercon. We combine our electrical engineering expertise with the latest electrical control technology to bring optimum results for product handling. Nercon's innovative electrical designs integrate conveyor systems into a cohesive, seamlessly operating production line with electrical controls that increase production efficiency, reduce operation costs and provide operations flexibility.

CAPABILITIES

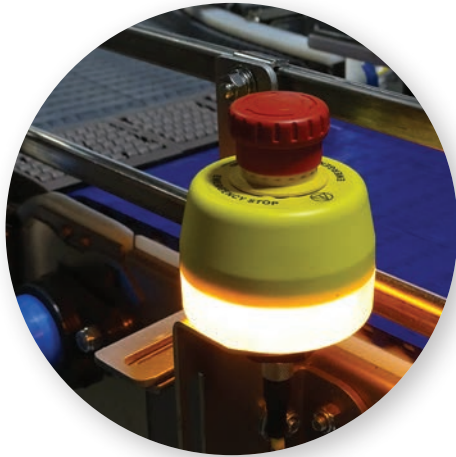

- Motor Control Centers
- PLC Control Centers
- Speed Control Modulation
- Servo Drive Systems
- Part Presence, Inspecting, Sorting, Tracking
- Diverging, Combining, Rejecting
- Counting & Collating

INDUSTRY SEGMENTS

- Snack Food & Bakery
- Packaged Foods
- Meat & Poultry
- Beverage
- Confectionery & Candy
- Dairy Food
- Produce
- Health & Beauty

APPLICATION TYPES

- Bottles
- Cans
- Cartons
- Cases
- Glass
- Pouches
- Pucks
- Trays

Full System Approach

Unlike a system integrator, we design both the conveyor and conveyor control system to work hand-in-hand within the larger production line.

When designed together, a conveyor and integrated control system helps streamline your operations and improve production rates—all with minimal labor and commissioning time. With a Nercon conveyor and conveyor control system, you can benefit from:

- Consistent product flow
- Reduced downtime
- Optimized system integration

You can rest assured knowing your production will keep moving with a Nercon conveyor and control system since all of our conveyors and control functions are setup and factory tested before they ship.

The Nercon Integrated Controls Advantage

To add to our more than 40 years of experience as a UL-listed designer, Nercon is also an OEM member of the Rockwell Automation

PartnerNetwork™ program. We are one of approximately 85 OEMS—and the only conveyor manufacturer—to gain access to a global network of best-in-class distributors, suppliers and local support to help solve automation challenges.
