

Accumulation Solutions

The accumulation of products during downstream equipment shut down is critical to overall production efficiency. Nercon's Re-Flow Accumulation Table is adaptable to meet accumulation needs and minimize downtime.

Nercon's [Re-Flow Accumulation Table](#) has the ability to accumulate and single file. The Re-Flow Accumulation Table utilizes a small footprint considering the large storage capabilities that it offers. The unique single filing concept of the Re-Flow Accumulation Table ensures smooth, jam-free combining of product. The recirculating design relieves back pressure in the combining area, and aids in overall accumulation pressure relief.

FEATURES

- Smooth jam-free combining of product
- Handles a variety of product shapes
- Minimal electrical controls
- Easily installed in existing line
- Small footprint
- Large storage capacity

INDUSTRY SEGMENTS

- Snack Food & Bakery
- Packaged Foods
- Produce
- Beverage
- Confectionery & Candy
- Dairy Food
- Frozen Foods
- Household Cleaning Products
- Pharmaceuticals
- Health & Beauty

APPLICATION TYPES

- Bottles
- Cans
- Glass
- Pucks

Unique Design

The unique concept of the Re-Flow Accumulation Table is the handling of non-round products. The angled rail aligns the long axis of the bottle in the direction of travel. The single filer area is set to allow the short axis of the bottle to pass through. A rotating assist wheel helps align the bottle to the correct orientation.

The offset pressure relief designed into the single filing area will allow a single row of products to continue through the discharge. If more than a single row of products are present in the single filing area, they are crowded onto the return flow side of the table and re-circulated to be accumulated or single filed for discharge.
